

Customer & Workforce Insights

Volume 21

December 2018

Overview

The November jobs report: gains across the board in seven of eight major categories, including all major supply chain areas.

Average hourly earnings rose 0.2 percent in November, keeping the year-over-year average at 3.1, a level not seen since the recession.

An early indicator to monitor: exports are down year over year in some major ports, possibly affected by tariffs.

The labor shortage has benefited minimum-wage earners, African-Americans, Latinos and Americans with a high school degree or less. They have all seen their jobless rates decline in recent months.

Manufacturing

Purchasing executives are reporting increased hiring difficulty despite the fact that over 10% more of them have raised wages in the past year.

And the number of jobs in sector keep growing: openings has surged at US manufacturers in recent months- despite tariff obstacles.

The STEM imperative has many different variations. Here is one: programs to reach younger learners, specifically girls.
